

## Tips for Home or School **Questions For Your Audiologist**

## By: Jill Grattan, Nevada Dual Sensory Impairment Project

- 1. What is my child's hearing loss in each ear?
- 2. What is the type of hearing loss my child has (e.g., conductive, sensorineural, mixed)?
- 3. What type of sounds and noises will he/she have difficulty hearing?
- 4. Will his/her hearing be affected by noisy environments and background noise (e.g., will he/she hear less in a classroom or restaurant)?
- 5. What, if any, medical condition does my child have?
- 6. Does my child have a progressive/degenerative condition? 6a. If yes, how rapidly should one expect changes to occur? 6b. What behaviors might I observe that indicate a change in my child's hearing?
- 7. How often should my child visit an audiologist to check his/her hearing?
- 8. What suggestions do you have for the teacher working with my child?
- 9. What information should be shared with the people who interact with my child?
- 10. What assistive listening devices might benefit my child?
- 11. What adaptations do you think my child might need in the educational setting or at home?
- 12. What should be expected in terms of daily functioning (e.g., strain, headaches, frustration, etc.)?

## **Screening Questions**

- 1. What does the 'newborn hearing screening test' actually screen for? 1a. Can my child pass this test and still be hearing impaired?
- 2. Tests related to hearing and functioning of the ear:
  - Impedance testing Tympanogram; Acoustic Reflex Test
  - Otoacoustic Emissions Testing (OAEs)
  - Auditory Brainstem Response (ABR)
  - Speech Audiometry Speech Awareness Threshold (SAT) or Speech Detection Threshold (SDT); Speech Reception Threshold or Speech Recognition Threshold (SRT)
- Behavioral Testing Behavioral Audiometry; Pure-Tone Audiometry or Pure-Tone Air Conduction Testing; Pure-Tone Bone Conduction Testing; Visual Reinforcement Audiometry (VRA); Conditioned Play Audiometry
- 3. For each hearing test listed above, you might want to ask:
  - 3a. What does actually test for?
  - 3b. Can my child pass the \_\_\_\_\_ and still be hearing impaired?
  - 3c. How old does my child need to be in order to be tested using
  - 3d. What are the procedures to test my child using
  - 3e. What is next step in testing my child's hearing and ear functioning?

## Assistive Listening Device and Hearing Aid Questions

- 1. What types of hearing aids and assistive listening devices are available?
- 2. Will my child's hearing be improved with a hearing aid?
- 3. What types of hearing aids and assistive listening devices are available for profound hearing loss?
- 4. What types of hearing aids and assistive listening devices are available for moderate hearing loss?
- 5. What types of hearing aids and assistive listening devices are available for mild hearing loss?
- 6. Does my child need hearing aids or another type of assistive listening device for a mild hearing loss?
- 7. What are benefits and risks of hearing aids and assistive listening devices?
- 8. There are many types of assistive listening devices including: cochlear implants, bone conduction hearing aids, in-thecanal-hearing aid, behind-the-ear hearing aids, several types of implanted hearing aids. Regardless of the type of hearing aid or assistive listening device, you may want to ask:
  - 8a. How does a \_\_\_\_\_ \_\_\_ function/work?
  - 8b. What are the benefits and risks of ?
  - 8c. What does \_\_\_\_\_\_ do that other hearing aids don't or can't?
  - 8d. Will \_\_\_\_\_\_ work if there is damage to the auditory nerve?
  - 8e. Will \_\_\_\_\_ work if my child has damage to other areas of the ear?
  - 8f. How long will it be before we know if \_\_\_\_\_ is helping?
  - 8g. What happens if \_\_\_\_\_ does not work?

- 8h. What happens to the inner ear function (or other areas of the ear) when \_\_\_\_\_\_ is placed? 9. What are the disadvantages to my child if I do not have him/her fitted for hearing aids or an assistive listening device?
